15:00 Collaborative Logistics Award: Auszeichnung für vertrauensvolle Zusammenarbeit in der Logistik

The Digitalization | Processes and Standards Commission of the DSLV German Freight Forwarding and Logistics Association will present the Collaborative Logistics Award for the first time at the Logistics Summit 2024. The award recognizes individuals, companies or organizations that are particularly committed to better and trusting collaboration in the logistics industry.

Trust as the key to digitalization

Trust plays a central role in the digitalized world of logistics. Only through close cooperation between all players - from freight forwarders and warehouse operators to shippers and customers - can the potential of digitalization be fully exploited.

The Collaborative Logistics Award therefore recognizes exemplary initiatives/ideas that, for example:

Promote transparency and data exchange in the supply chain, Establish collaborative processes and platforms, Develop common standards and interfaces, Implement confidence-building measures and security concepts.

With the Collaborative Logistics Award, the Commission emphasizes the importance of collaboration in the logistics industry and supports innovative solutions based on trust.

12:00 Evolving Automation: How companies and markets are shaping the factories of the future

This masterclass highlights how companies and market dynamics are driving future factory automation. The focus is on developing end-to-end solutions that integrate fully automated and future-proofed factories. Topics like automated truck loading and unloading, optimizing factory efficiency vs. line efficiency, and the importance of data processing and software as critical components are presented. Particular attention is paid to the integration of production and warehouse processes as well as the role of distribution centers. The practical applicability and potential impact of these developments in various industries through concrete sector examples.

15:00 Looking for a robot colleague: AI as the answer to the shortage of skilled workers in logistics?

This keynote will shed light on the role of artificial intelligence as a driver for a new generation of intelligent robot assistants. The role of humans in this scenario, where automation is not (yet) possible and how employees can be better supported will also be discussed. New areas of application for robotics will also be discussed, ranging from yard logistics to the (partially) public sector.
